Subject: **Telephone Conversation Confirmation**
Naval Submarine Base Kings Bay, Georgia
Contract Task Order 094
Prime Contract No. N62467-89-D-0317

Dear Madeleine,

I want to thank you for your rapid response to the question regarding use of Method 8290 proposed by David Driggers of Naval Facilities Engineering Command - Southern Division. The question, as I understand it, dealt with the acceptability of Method 8290 data. This letter serves as a record of the response you provided me on Friday, 25 February 1994.

You informed me that the Georgia Environmental Protecting Division (EPD) can not accept Dioxin and Furan data derived from samples analyzed by Method 8290. This method is proposed for inclusion to SW 846, but is not final at this time. The Georgia EPD requires that only Methods which are final in the Third Edition, with Update 1, of SW 846 be used for sample analysis. The Method 8280 is an acceptable method for Dioxin and Furan analysis.

From our conversation and the above, it is my understanding that for Dioxin and Furan analysis, only Method 8280 data is acceptable and only data derived from analysis performed by this method is acceptable. This Method is final in the Third Edition, with Update 1, of SW 846.

If this is not an accurate record of our conversation of 25 February 1994, or I have misinterpreted our conversation, I would appreciate notification to this effect. If we do not hear from you by 11 March 1994, we will assume this is an accurate interpretation of our conversation.

ABB Environmental Services Inc.
